Subject: Letter of Intent — Hire, Train & Deploy Programme (Junior AI Research Associate)

Dear VADIVELU LOKAIAH THULASIRAM,

Congratulations on clearing our selection stage. We are pleased to extend this conditional Letter of Intent under ROOMAN's Hire, Train & Deploy programme. You have shown sound grasp of technical concepts and need focused training on AI to be ready for the role. This letter sets out how that works, in full and plain terms.

1. Nature of this letter

1.1 Intent. This Letter of Intent expresses the Company's intention to train you and to consider you for engagement as a Junior AI Research Associate.

1.2 Programme. You will undergo the Hire, Train & Deploy programme commencing 03rd August 2026 as described in Clause 3 and Annexure A.

2. Course fee

2.1 Fee. A course fee of ₹50,000 (Rupees Fifty Thousand only) is payable for the programme, through the Company's official payment channel only. Payment must never be made to any individual's personal account.

2.2 What the fee covers. The fee covers three (3) months of structured online AI training, followed by two (2) months of onsite internship training at our office, including mentorship, learning infrastructure and live-project exposure.

2.3 The fee is non-refundable. The course fee is NOT refundable, in whole or in part. It is consideration for the training and the onsite internship the Company delivers to you. What the Company assures you in return is the outcome at Clause 4 — either a job, or a documented work experience certificate — rather than a refund.

2.4 No other charges. No further programme fee, training fee, penalty or exit charge is payable by you under this programme.

3. Programme structure

3.1 Months 1–3 — online training. Three (3) months of compulsory online training in applied AI skills. (AI Foundation and AI Professional Track)

3.2 Months 4–5 — onsite internship. On completing the online training, you will attend our office for a two (2) month onsite internship on live project work.

3.3 Attendance and performance. Both phases are compulsory. Your attendance, learning and performance throughout will be assessed.

4. Your outcome — two possibilities

Whichever way it goes, you do not finish empty-handed.

(a) If you perform well — successfully completing the training and the onsite internship and being selected on merit — you will be offered a job as a Junior AI Research Associate at ROOMAN Technologies or at one of our associate companies, on terms communicated in a separate offer letter.

(b) If you do not qualify for the job, the Company will issue you a Course Completion Certificate together with a Work Experience Certificate covering the full duration for which you were associated with the Company. That documented work experience distinguishes you from the regular fresher pool and improves your opportunities elsewhere.

4.1 Merit-based confirmation. Selection for the job is assessed on merit and is not guaranteed. We state this clearly so that your decision is fully informed.

4.2 No refund in either case. Neither outcome carries a refund of the course fee. Your assurance under this programme is the outcome at Clause 4, not the return of the fee.

4.3 Duration covered by the certificate. The Work Experience Certificate will state the actual period for which you were associated with the Company, covering the online training and the onsite internship you completed.

5. General terms and conditions

5.1 No lock-in during the programme. This programme itself carries no minimum-service commitment and no early-exit charge. The only financial term is the non-refundable course fee in Clause 2. Any job offered to you at Clause 4(a) will be on the terms of that separate offer letter, which may include its own service commitment.

5.2 Confidentiality and intellectual property. You shall keep all Company and client information confidential, and all work product created during the programme shall vest solely in the Company.

5.3 Code of conduct. You agree to abide by the Company's policies on conduct, data security, anti-harassment and IT usage.

5.4 Governing law and jurisdiction. This letter is governed by the laws of India, and the courts at Bangalore, Karnataka shall have exclusive jurisdiction.

Please sign and return this Letter of Intent by 03rd August 2026 to confirm your enrolment. Payment instructions will be shared through our official channel only.

For ROOMAN Technologies Pvt. Ltd.

Annexure A — Job Description

Position: Junior AI Research Associate

Department: Artificial Intelligence / Products

Location: Bengaluru

Reports to: AI Team Lead

Role summary

The Junior AI Research Associate works alongside ROOMAN's AI team to build and deploy real AI products and solutions. The role combines structured learning with hands-on delivery on live projects, using modern AI technologies such as large language models, retrieval-augmented generation, and agentic frameworks.

Where you may be deployed

AI-based application development for ROOMAN's internal projects and the tenders we participate in, and for our clients abroad.

StartupVarsity projects, where you may be tagged with one of the founders' teams to help build their application.

Our GCC and other clients who hire their technical resources from ROOMAN.

Key responsibilities

Build, test and deploy AI features and applications on live projects.

Work with modern AI models, APIs and agentic frameworks.

Mentor ROOMAN students on their projects, and clarify the technical doubts they raise.

Visit clients to understand their requirements, and interact with them regularly so the product is developed in line with their expectations.

Evaluate new AI tools and approaches, and document findings clearly.

Collaborate with the team through code review and shared delivery standards.

Take ownership of assigned modules and deliver to agreed timelines.

What we look for

Willingness to learn, the right attitude, and sound aptitude. No prior AI experience is required.
